

will be Spanish-speaking. The success of these citizens is vital to our continued national prosperity, and we must ensure that they are empowered with the tools and opportunities they need to thrive in the next century.

That is why my Administration has worked to widen the circle of economic opportunity, enforce our civil rights laws, invest in health and education, and promote racial reconciliation. We have launched a major initiative to mobilize the resources and expertise of the Federal Government, the private sector, and local communities to end racial and ethnic disparities in health conditions and health care. We established the first-ever Office of Minority Health Research and Alternative Medicine at the National Institutes of Health. We also have sought to expand our Hispanic Education Action Plan with an additional \$480 million for improving educational programs and institutions serving high concentrations of Hispanic students. We cannot seize the enormous opportunities of the 21st century if a large percentage of our children lack the skills and knowledge they need to reach their full potential.

In honor of the many contributions that Hispanic Americans have made and continue to make to our Nation and our culture, the Congress, by Public Law 100-402, has authorized and requested the President to issue annually a proclamation designating September 15 through October 15 as "National Hispanic Heritage Month."

Now, Therefore, I, William J. Clinton, President of the United States of America, do hereby proclaim September 15 through October 15, 1999, as National Hispanic Heritage Month. I call upon government officials, educators, and the people of the United States to honor this observance with appropriate ceremonies, activities, and programs, and I encourage all Americans to rededicate themselves to the pursuit of equality.

In Witness Whereof, I have hereunto set my hand this fourteenth day of September, in the year of our Lord nineteen hundred and ninety-nine, and of the Independence of the United States of America the two hundred and twenty-fourth.

William J. Clinton

Memorandum on the Working Group on International Energy *September 14, 1999*

Memorandum for the Assistant to the President for Science and Technology

Subject: Working Group on International Energy

The report of the President's Committee of Advisors on Science and Technology (PCAST), *Powerful Partnerships: The Federal Role in International Cooperation on Energy Innovation*, will help advance my Administration's goals for addressing energy-linked economic, environmental, and security challenges. As you point out in the synthesis of the report, our window of opportunity for moving the world off of its current energy trajectory—which entails higher consumer costs, greater regional pollution, more pronounced climate disruption, and increasing risks to energy security—is closing fast. Thus, we should act expeditiously on PCAST's recommendations for strengthening capacities for energy technology innovation, promoting technologies to limit energy demand and for a cleaner energy supply, and improving management of the Federal international energy research and development portfolio.

As a first step, I direct you to form a working group on international energy research, development, demonstration, and deployment under the National Science and Technology Council, as recommended by PCAST. The working group should build on the PCAST report and assess the portfolio of programs underway in the Federal agencies and develop a strategic vision, including budget recommendations that can be considered in agency requests for FY 2001.

Please commend John Holdren, the members of his panel, and all of PCAST for its fine report on this important matter.

William J. Clinton

NOTE: This memorandum was released by the Office of the Press Secretary on September 15.

Remarks to the People of New Zealand in Christchurch, New Zealand

September 15, 1999

Thank you very much. Good afternoon. Prime Minister Shipley, Burton and Anna and Ben; and Sir Edmund Hillary and Lady Hillary; Ambassadors Beeman and Bolger, and their wives; to Mayor Moore: Dr. Erb, Dr. Benton, Mr. Mace, Dr. Colwell; to all of those who have made our visit here so memorable: Let me begin on behalf of my family and my party by thanking the officials and the people of New Zealand for giving us 5 absolutely glorious days in one of the most beautiful places on Earth. We are very grateful.

Hurricane Floyd

I hope you will all indulge me just one moment. This is my only chance to speak not only to you but to the people of the United States today. And since we're here to talk about the weather, you should know that my country is facing one of the most serious hurricanes ever to threaten the United States, if the predictions of its force and scope hold true.

This morning I signed an emergency declaration for the States of Florida and Georgia to provide for assistance for emergency protective and preventive measures. I have been in close contact with our Vice President, Al Gore, and our Director of Emergency Management, James Lee Witt. They are working around the clock to prepare for the storm. I ask all of you here to remember my fellow Americans, and after we finish the state dinner tonight, I am going to fly home, and we will make the best job of it we can.

Antarctica and Climate Change

Let me say I am particularly honored to be here with Sir Edmund Hillary, referred to in our family as my second favorite Hillary. [Laughter] I read that when Sir Edmund turned 50 he resolved to do three things: to build a house on the cliffs above the Tasman Sea; to become a better skier; to do a grand

traverse up the peaks of Mt. Cook. I'm wondering what he resolved to do when he turned 80. I hear the All Blacks may have a new fullback. [Laughter] I wish you a happy 80th birthday, sir, and I wish all of us might lead lives half so full and productive as yours.

I come here to this beautiful city and to this place to deepen a partnership between the United States and New Zealand that is already long and strong. In this century, young Americans and New Zealanders have fought again and again side by side to turn back tyranny and to defend democracy. We have worked together on peacekeeping missions. We have stood together for expanded opportunity for our people through trade. We even let you borrow the America's Cup from time to time. [Laughter] We hope to reverse our generosity shortly. [Laughter] We are grateful for your friendship, and we thank you for it.

This magnificent center stands as a symbol of what we can accomplish when we work together, and I would argue is a symbol of what will be most important about our co-operation in the 21st century.

You heard Sir Edmund talk about his trip across Antarctica. When he started it, some people called it the last great journey on Earth. As I was reading about it, I understand that he actually overheard one farmer ask another, "that there Antarctica, how many sheep do they run to the acre?" [Laughter]

But America believed in his mission and has long been fascinated with Antarctica. Way back in 1820, Nathaniel Brown Palmer was one of the first people to sight it. A few years later, an American exploring expedition mapped more than 1,500 miles of the Antarctic coast, ending a centuries-old debate over whether a big land mass, in fact, existed around the South Pole.

Forty years ago, inspired in part by Sir Edmund's expedition, the United States convened a meeting in Washington to preserve the Antarctic forever as a haven for peace and scientific cooperation. Today, we can all be proud that not a single provision of the Antarctic Treaty has ever been violated. Forty-three nations, representing two-thirds of the world's population, adhere to the treaty. And the Antarctic is what it should be,
